Future plans/suggestions .

Smart suggestions later plan

Stage	When	What it does
1. Simple rules	Weeks 1-8	Averages of orders per gate by hour and weekday, plus a survey of offices and hostels
2. Forecast model	After a few thousand orders	Predicts demand from hour, weekday, weather and events
3. Rider nudges	After stage 2	Suggests moving to a node where orders are expected and nobody is near, with a check so scooters do not bunch up

Suggestions never override safety rules or the sweet-spot checks.
